

Visualizing Housing Market Trends: An Analysis of Sale Prices and Features using Tableau

1.2 – Purpose of the Project

The purpose of this project is to look at housing market data and see how different things about a house affect how much it sells for. The project uses Tableau to turn data into pictures that help us see what is going on like how big the house is, how many bedrooms and bathrooms it has, where it is, how big the yard is and what shape the house is in.

This project wants to help people who are buying or selling houses and people who work in estate by giving them good information to make decisions. By looking at pictures of the data people can understand what is happening in the market see what makes a house worth more or less and look at what's happening in different neighbourhoods and with different kinds of houses.

Purpose of the Project

The goal of this project "Visualizing Housing Market Trends: An Analysis of Sale Prices and Features using Tableau " is to turn complicated housing data into pictures that are easy to understand. It wants to see how different things about a house affect how much it is worth so people can make decisions.

Here is what the project is trying to do broken down:

1. Figure Out What Makes Houses Cost More

The project wants to see how things like how big the house is, where it is, how many bedrooms and bathrooms it has how old the house is and if it has been fixed up affect how much it sells for.

2. Find Trends in the Market

By turning data into pictures like scatter plots, heat maps and line graphs the project helps us see what is going on in the market like:

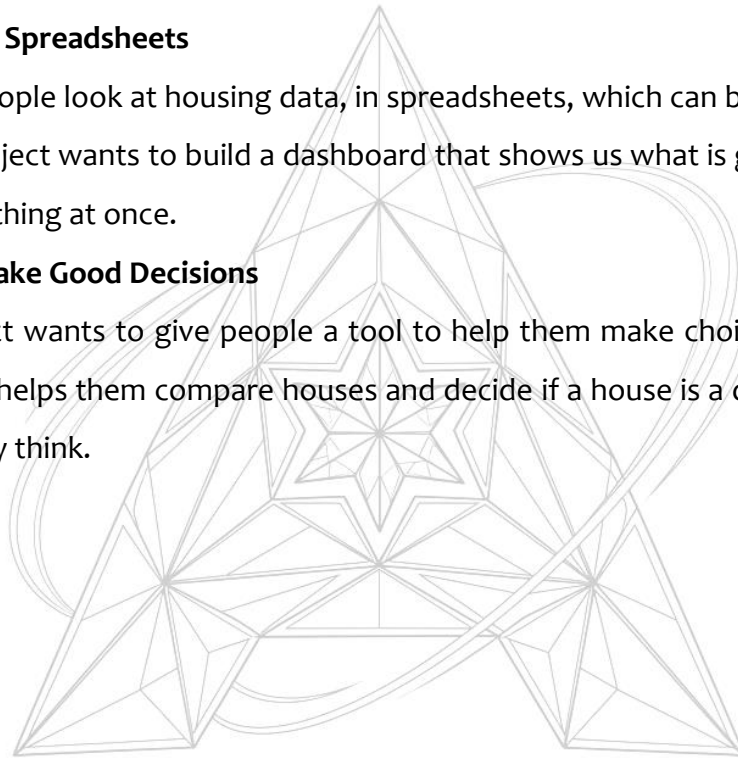

- * Which neighbourhoods are expensive.
- * How much houses are worth at times.

3. Use Pictures of Spreadsheets

Usually people look at housing data, in spreadsheets, which can be messy and lead to mistakes. The project wants to build a dashboard that shows us what is going on in a way so we can see everything at once.

4. Help People Make Good Decisions

The project wants to give people a tool to help them make choices when buying or selling houses. It helps them compare houses and decide if a house is a deal, based on facts, not just what they think.
