## 6.2 – Data Connectivity

In this project we work with a housing market dataset stored in a CSV file. We convert it into an Excel file to make it easier to use in Tableau. The data connectivity process is about importing the Excel dataset into Tableau and setting it up for visualization and analysis.

### Step 1: Collecting Housing Market Data

We collect the housing market dataset in CSV format. This dataset includes information like sale prices, number of bedrooms and bathrooms, property area and other housing features.

### Step 2: Converting CSV to Excel

We open the CSV dataset in Microsoft Excel. We check the data format, column names and values. Then we save the file in Excel format. This makes it ready to connect to Tableau.

### Step 3: Starting Tableau Desktop

We open Tableau Desktop software. On the start page we go to the Connect section.

### Step 4: Connecting Excel File to Tableau

Under the To a File option, we select Microsoft Excel. We browse our system. Choose the converted Excel housing dataset. We click Open to connect Tableau to the dataset.

### Step 5: Loading and Verifying Data

Tableau imports the Excel data into the Data Source tab. We check the field names, data types and number of records. We make sure numerical fields like sale price and area and categorical fields like location or house type are correctly identified.

### Step 6: Preparing Data

# Visualizing Housing Market Trends: An Analysis of Sale Prices and Features using Tableau

---

We rename columns if needed for readability. We remove fields or correct inconsistent values. We handle missing or null values to improve analysis quality.

## **Step 7: Creating Data Connection for Visualization**

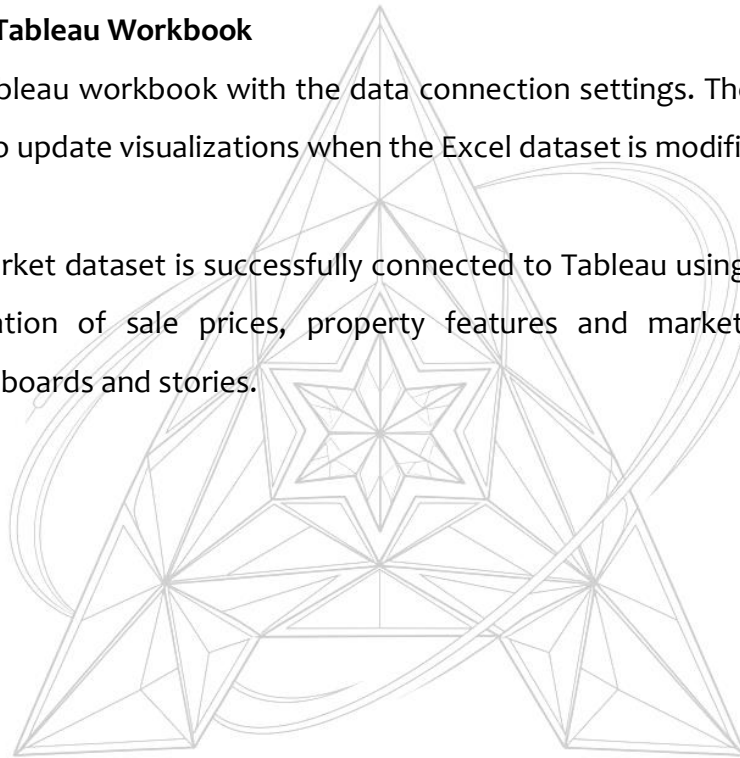

After verifying and cleaning the dataset is connected to Tableau. The connected data source is used to create worksheets, charts, dashboards and stories to analyze housing market trends.

## **Step 8: Saving Tableau Workbook**

We save the Tableau workbook with the data connection settings. The saved workbook can be reused to update visualizations when the Excel dataset is modified.

### **Result:**

The housing market dataset is successfully connected to Tableau using an Excel file. This allows visualization of sale prices, property features and market trends, through interactive dashboards and stories.
