

Visualizing Housing Market Trends: An Analysis of Sale Prices and Features using Tableau

CHAPTER – XI

FUTURE SCOPE

11.1 - Future Scope

The **Visualizing Housing Market Trends project** gives a starting point for looking at real estate data with interactive charts. To make it even better we can add advanced analysis tools use up-to-the-minute data and build smart prediction models. This will help us understand housing market trends in detail.

Some ideas for improvements are:

- Using current housing data from property websites and government records to track changes in property prices, demand and local trends.
- Adding machine learning algorithms to predict house prices based on past data and property features.

The project can also be expanded by:

- Creating maps and location-based analysis to see how things like nearby schools, transportation and shops affect property values.
- Adding interactive charts and custom filters to let users explore housing data in more detail.

The system can be improved by:

- Using cloud storage and online charts to handle datasets let users access it remotely and make it easier for multiple users to work together.
- Connecting with business intelligence tools and automated data pipelines to make it easier to collect prepare and visualize data.

Overall, the goal, for this project is to turn the Tableau system into a smarter bigger and real-time housing market analysis platform. This will help buyers, sellers, investors and real estate professionals make decisions with accurate forecasts. The housing market trends analysis will provide insights. The Visualizing Housing Market Trends project will be a tool.
